Seasons

Spring: March–May
Summer: June and July
Fall: August–November
Winter: December–February

Frequency Classification

C = Common: Occurs in essentially all suitable habitats during appropriate
seasons, with certain species at times abundant; species should be easy to find.

F = Fairly common: Occurs in some or most suitable habitats during appropriate seasons, but less abundant and at times few in number; species often found.

U = Uncommon: Occurs in relatively small numbers; species not observed regularly even in proper habitats.

R = Rare: Either found in restricted habitat, or occurs most years in small
numbers; species difficult to find.

V = Very Rare: A species beyond its normal range that may occur intermittently and in very small numbers.

A = Accidental: Only one or two historical records to date

NP = Not Present or No Records: A species is generally not present in during a specific season (due to seasonal migration) or no records exist of a species' presence in that season.

This checklist was designed by experienced ornithologists and birders to help visitors to the Southeast Alaska Birding Trail plan and enjoy their trips. This list is not a guarantee that a particular species will be present at a given location, and not all species on a community list will be present at all sites in that community. This list is for recreational use only, not for use in scientific publications, environmental impact assessments or other planning documents.
